

Dr Åse Marit Leere Øiestad, Folkehelseinstituttet, Oslo

Preliminary title: Determination of new psychoactive substances with MS

Åse Marit Leere Øiestad holds an M.Sc. degree in chemistry from the University of Oslo. She finished her Ph.D. in Oslo in 2001, working with fundamental reaction mechanistic problems using mass spectrometry and quantum chemical calculations. She now works as a senior scientist at the Norwegian Institute of Public Health, domain for Forensic Medicine, developing methods for analysis of narcotics and medicinal drugs in human samples with the aid of mass spectrometry. Recent interests of research include new psychoactive substances, neurotransmitters, analysis of different autopsy media and high-res MS.
